

Epigenetic mapping technology for improving human wellness and immune system support

INTEGRATE EPIGENETICS INTO YOUR BUSINESS

Given the global crisis caused by the Covid19 virus, it's critical that individuals build their immune systems as quickly and appropriately as possible to minimize the risk of infection. The Cell WellBeing technology is one of the world's leading tools in helping to provide a tool for assessing an individual's nutritional and immune system deficiencies.

THE S-DRIVE

The key component is the S-Drive technology which maps the hair root bulb for key epigenetic indicators and returns a full report back in just 15 minutes. This S-Drive is FDA compliant for general wellness technology, and is non-invasive and easy to use.

Digital information is gathered using four root follicles, plucked from the head of the client. The S-Drive then 'maps' the hairs in order to highlight environmental exposures, food and additive sensitivities, nutrient demands, viral and fungal factors and even electrical interference influences (EMFs).

The S-Drive then sends this coded information to Germany where powerful computers using sophisticated logarithms decode and suggest which epigenetic signals influence gene expression. The returned report proposes changes to diet, nutrition and lifestyle that could be adopted to support optimal gene expression and wellness.

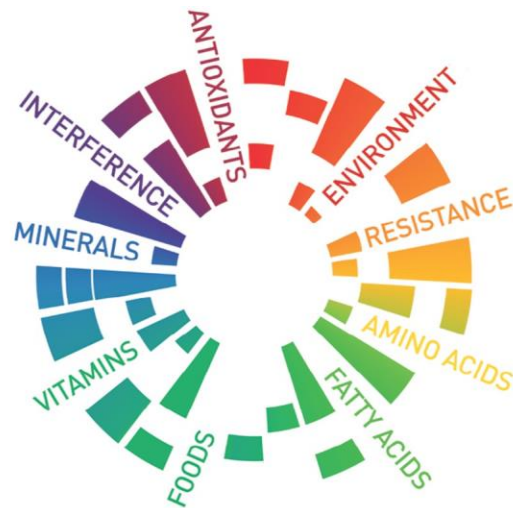

Foods Restrictions Summary	
Clams	Cucumber
Rhubarb	Pumpkin
Cashew	Dates
Carrot	Kani
Mango	

THE REPORT

The fully personalized 30+ page report covers vitamins, minerals, antioxidants, fatty acids and amino acids, as well as electrical interference (tablet, mobile phones, Wi-Fi), environmental exposures, foods to eat and foods to avoid and the bodies ability to resist viral, fungal infections and more.

It also includes the 17 different body systems (like immune, gut, detoxification, etc.) which are impacted by the underlying nutritional relevancy indicators.

The data is laid out in the charts and tables of the report and is prioritized to make it easy to understand. The report also allows you to see first-hand, the effects of the epigenetic influences at a body systems level and use this in your consultation and resulting protocol.

- Immune system challenges
- Identifies crucial aspects of gut support
- Highlights exposure to 4G and 5G

RELEVANT FOR 90 DAYS

The Report is relevant for 90 days because our bodies are constantly changing and adapting to the epigenetic influences that can have an effect on our physiology. Get your clients into a 90-day cycle and let them feel the benefits. This brings significant preventative capabilities for your clients, along with building your client database.

TRAINING AND SUPPORT

You will be offered training and support by experienced practitioners to get you up and running and to help you build your core knowledge of the technology and its applications in building immune system and nutritional support.

Contact us now to enhance your capabilities in counseling clients on proper nutrition and support of immune system.
